Andean Forest Programme – Workshop 10.02.2016

Zora Urech,
Advisor Forests and
Biodiversity / HELNETAS
Swiss Intercooperation

Berne, 10.02.2016

Andean Forests Programme – Basic info

- Financed by SDC – Global Programme Climate Change
- Implemented by HELVETAS Peru and CONDESAN
- Duration: October 2014 – October 2018 (first phase)
- Budget: 5,9 Mio CHF
- Geographical scope: Argentina, Chile, Bolivia, Peru, Ecuador, Colombia, Venezuela

Andean Forests Programme

General Objective

To improve climate change adaptation and mitigation capacities

through

consolidation and scaling-up of policies, practices, tools and successful incentive schemes relevant to **sustainable management of Andean forest landscapes**

3 Components

3. Advocacy, Replication, Upscaling

- National
- Regional
- Global

Collaboration:
Global alliances, networks, platforms

1. Investigation and knowledge management

- Local
- Regional

Collaboration:
Universities, research institutions, networks

2. Validation of good practices in learning sites

- Local

Collaboration:
local alliances

1. Investigation and knowledge management

Improve the knowledge and understanding about:

- Structure and function of Andean forest ecosystems
- Socio-ecological context of Andean forest landscapes

Three main strategies:

1. Continuous monitoring systems on ecosystem dynamics
2. Strengthening existing Andean monitoring networks
RedGloria: Impact of climate change on biodiversity
Andean Forest Network: Carbon – Biodiversity monitoring
3. Identify knowledge gaps and implement applied research

1. Investigation and knowledge management

1. Identify knowledge gaps and implement applied research

Elaboration of a research agenda

Research Grant Programme
Ca. CHF 80'000

Support specific studies

Generate additional funding
r4d / SNIS etc

2. Validation of good practices in learning sites

Strengthen effective ongoing action for sustainable land and forest management and promote their replication:

Three main strategies:

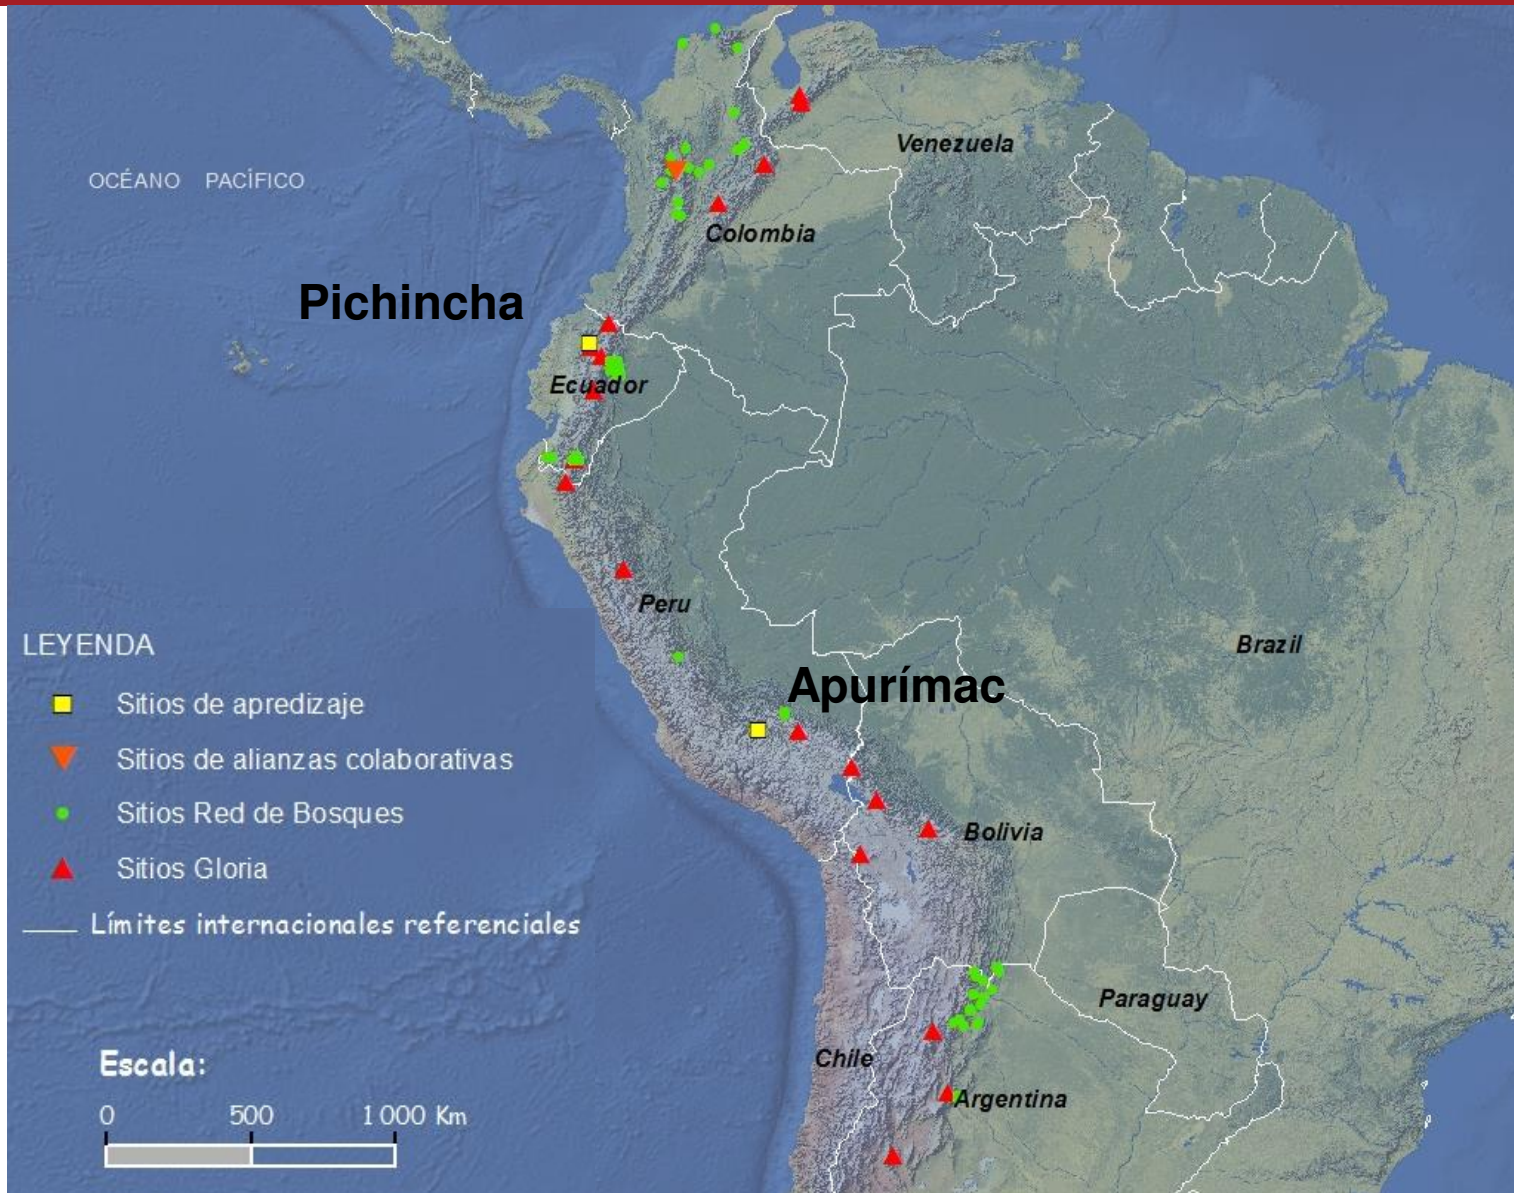

1. Identification, consolidation and promotion of relevant strategies
2. Valuation of Andean forests' benefits
3. Development and validation of methodological packages and tools for the management of Andean forests

3 Advocacy, replication, and upscaling

Four main strategies:

- 1. Systematization** of lessons learned on sustainable management of Andean forests
- 2. Promote** opportunities for a **dialogue** on generated knowledge
- 3. Strengthen capacities** and disseminate information
- 4. Foster partnership** to facilitate collaborative work

Intervention map

Today's objective?

- Establish an **exchange among** researchers and the Andean forest programme
- Review the **conceptual framework** of the research agenda
- Identify and **prioritize research needs** for the sustainable management of Andean forest landscapes
- Identify opportunities for **collaborative arrangements**
